

GelStick PAG supporting sheets for acrylamid

GelStick PAG Film is a transparent, flexible polyester film designed to support polyacrylamide gels. The acrylamide monomers covalently attach to the coating on the film during the polymerization reaction. Gels remain permanently attached to the film through electrophoresis and all subsequent fixing, staining, destaining, and drying procedures.

GelStick polyester sheets for Polyacrylamid-Gels

| *Size | Quantity | Cat.No. |
|-----------------|-----------|---------|
| 245 mm x 125 mm | 30 sheets | 29001 |
| 260 mm x 125 mm | 30 sheets | 29002 |
| 265 mm x 193 mm | 30 sheets | 29003 |
| 265 mm x 213 mm | 30 sheets | 29004 |
| 50 m x 125 mm | 1 roll | 29005 |
| 200 m x 193 mm | 1 roll | 29006 |

One surface of the film is chemically activated, providing covalent binding to the acrylamid layer.
